
WGEO Download

Georeferencing, Geoimaging & Transformation

WGEO 5.0

We provide the software WGEO 5.0 for download here. The installation comes in two varieties

- **web-based installation**

The web-based version consists of a small executable that allows you to select features first and downloads only the selected items afterwards. This may save time if you do not want to install all features at once.

- **download package based installation**

The download package installation downloads all the data before installation. It is needed when you want to install WGEO on machines that are not connected to the internet. It is also recommended for multiple installations, avoiding a new download for each machine.

Please use the online help to familiarize yourself with WGEO!
